

Dear Sir or Madam,

1. IRN Tech is the exclusive agent of the innovative technology used for municipal and industrial wastewater treatment both in Poland and abroad. The technology is protected by a patent granted in the Republic of Poland.
2. Owing to this technology raw sewage contaminants are reduced by 99.5%. It means that raw sewage is treated up to class II water (A2 category) in accordance with the currently effective Ordinance of the Minister of Environment 27.11.2002 [Journal of Laws no. 204 item 1728].
3. The reduction of exploitation costs by at least 50% is another undeniable advantage of this technology.
4. The investment costs are lower by 25%. Moreover, this kind of a wastewater treatment plant requires only half of the area needed for building a traditional treatment plant.
5. This innovative technology, along with the proper process of the lime stabilization of sludge, enables the creation of a final product (i.e. pellets), which is a balanced, eco-friendly fertilizer for agricultural purposes.
6. The treatment process itself is not affected by either high or low temperatures and is odour-free.
7. Process line automation enables the full quality control of treated wastewater at every stage of the process. It also requires less management.
8. Six wastewater treatment plants that have been built so far are a proof of the effectiveness of the above technological and economical solutions.

If you require any further information, do not hesitate to contact us,

Yours faithfully

Zbigniew Nowak, CEO
